

# Chemists Finish Titanium Thesis

By WILBERT D. EGER

This year, members of the Senior Class who have majored in Chemistry, cooperated on a joint thesis — assembling a comprehensive bibliography of titanium and its compounds. In the form of a card index, it lists sources of theoretical, analytical, and preparative chemistry articles and patents. It is expected to be especially valuable to those who are doing advanced work on the chemistry of titanium. The number of cards compiled has been variously estimated as between three and four thousand.

The project, undertaken in fulfillment of the thesis requirement for graduation, was under the direction of Father Brown. Students participating in the assignment were: Nathan A. Borkowski, Wilbert D. Eger, Joseph M. Hoare, Donald W. Hoch, Charles A. Parlato, Robert H. Schuler, Kenneth F. Schunk, Louis S. Serafin, and Herbert I. Sherman.
