HIT 689	Master's Project I	(1)	_____
HIT 699	Master's Project II	(1)	_____

38 Credits

The Health Information Technology program is designed for individuals with a Bachelor's degree who are currently working in health care, technology, health care policy, public health, or related fields.

Graduates of the Master's in Health Information Technology program will be well prepared to serve others and to help improve health care delivery. This program will equip students to better manage increasingly complex health care operations, and provide the necessary critical thinking skills as part of decision-making process essential to working in the health care field. Graduates will also secure marketable knowledge and skills in the health care environment.
