
Senior Chemists Author Article in National Journal

Alfred C. Boyd, Jr., and Daniel J. Kay, Senior chemistry students at Canisius, are co-authors of "Laboratory Experiments with Ion-exchange Resins," an article which appeared in the April issue of the *Journal of Chemical Education*. This paper describes experiments which Mr. Boyd and Mr. Kay developed with Dr. Schuler of the Chemistry Department for use in the Senior physical chemistry laboratory. Involved are novel chemical separation techniques employing ion-exchange resins, agents which have become available only within the past several years. The authors say that they have had requests from a number of other schools for this information.
